Requires a Verizon "air card" (modem) or other wireless broadband device. Contact Verizon Wireless for available options and devices.
<p>WildBlue (merged with Exede – see EXEDE above)</p>	Satellite	(see EXEDE above)

- **Sea Ranch Connect provides 50 Megabits per second (Mbps) for both download & upload.** Speeds for all other providers have wide variances and a range of speeds, limits and services depending on the plan chosen.
- **Other than Sea Ranch Connect (which always provides 50 Mbps down/up),** a variety of factors affect each lot's service options as well as speeds experienced (TSR location, home orientation, terrain, trees, interference, etc.) – **be sure and check your location and installation options with the provider.**
- While there are some exceptions, members needing VPN (Virtual Private Network) access or using Internet telephone services are typically NOT able to use the satellite services due to the latency inherent in satellite transmissions.
